

DEC 02 1999

MR. REYNOLDS: Robert Reynolds.

1... And [I] feel that Yucca Mountain should not be the nuclear
dump site for the nation's waste because [] it has -- because I have
looked at the risks and the pros and cons of dumping nuclear waste in
1 Yucca Mountain, and [I] have found that there are many reasons not to,
2 including transportation through towns, [] that [it] cannot be transported
through because of right angle turns that the truck must turn through.

And with the length of the truck being 220 feet, the truck wouldn't
be able to make these, and they would have to build extra bypasses in
order to go around these towns or through these towns. And that would
not be cost efficient, as many of the DOE representatives have said,
because it would cost thousands of dollars to bypass, and I have
already heard of two towns which bypasses would have to be built
through them.

Also the railways would not be able to be used because
there is a law against putting nuclear waste and things like that
through tunnels. And since Nevada is a mountainous region, the trains
would probably have to go through tunnels to go to the site. [] That is
all.
